

Solar System — Planetary Sizes & Distances

Planet Size Comparison (Relative Scale)

The diagram below shows the relative sizes of the eight planets. Jupiter is the largest, while Mercury is the smallest. Sizes are proportional to actual planetary diameters.

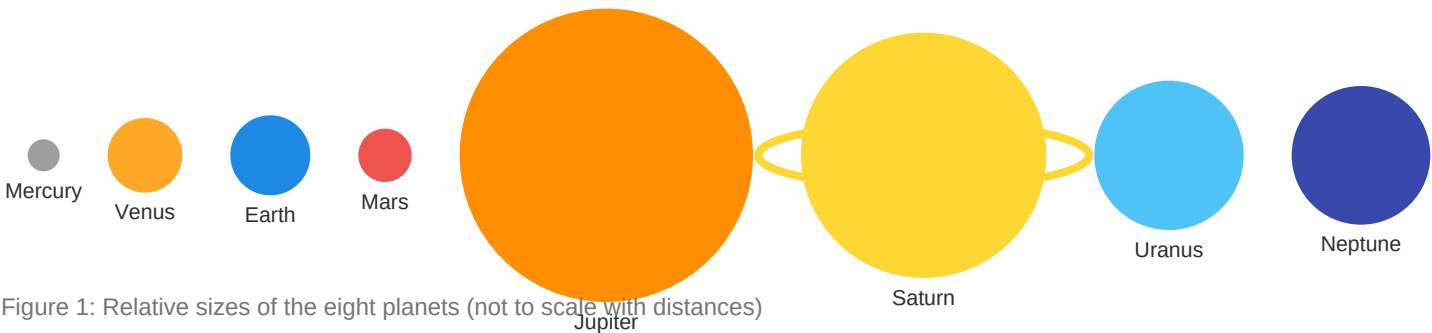

Figure 1: Relative sizes of the eight planets (not to scale with distances)

Orbital Periods and Distances from the Sun

Planet	Distance from Sun (AU)	Orbital Period	Diameter (km)
Mercury	0.39	88 days	4,879
Venus	0.72	225 days	12,104
Earth	1.00	365 days	12,756
Mars	1.52	687 days	6,792
Jupiter	5.20	11.9 years	142,984
Saturn	9.58	29.5 years	120,536
Uranus	19.2	84 years	51,118
Neptune	30.1	165 years	49,528

Table 1: Key planetary data. AU = Astronomical Unit = 149.6 million km.

Solar System — Structure & Zones

The Solar System — Orbital Structure Diagram

The diagram below shows the orbital zones of the Solar System from the Sun outward.

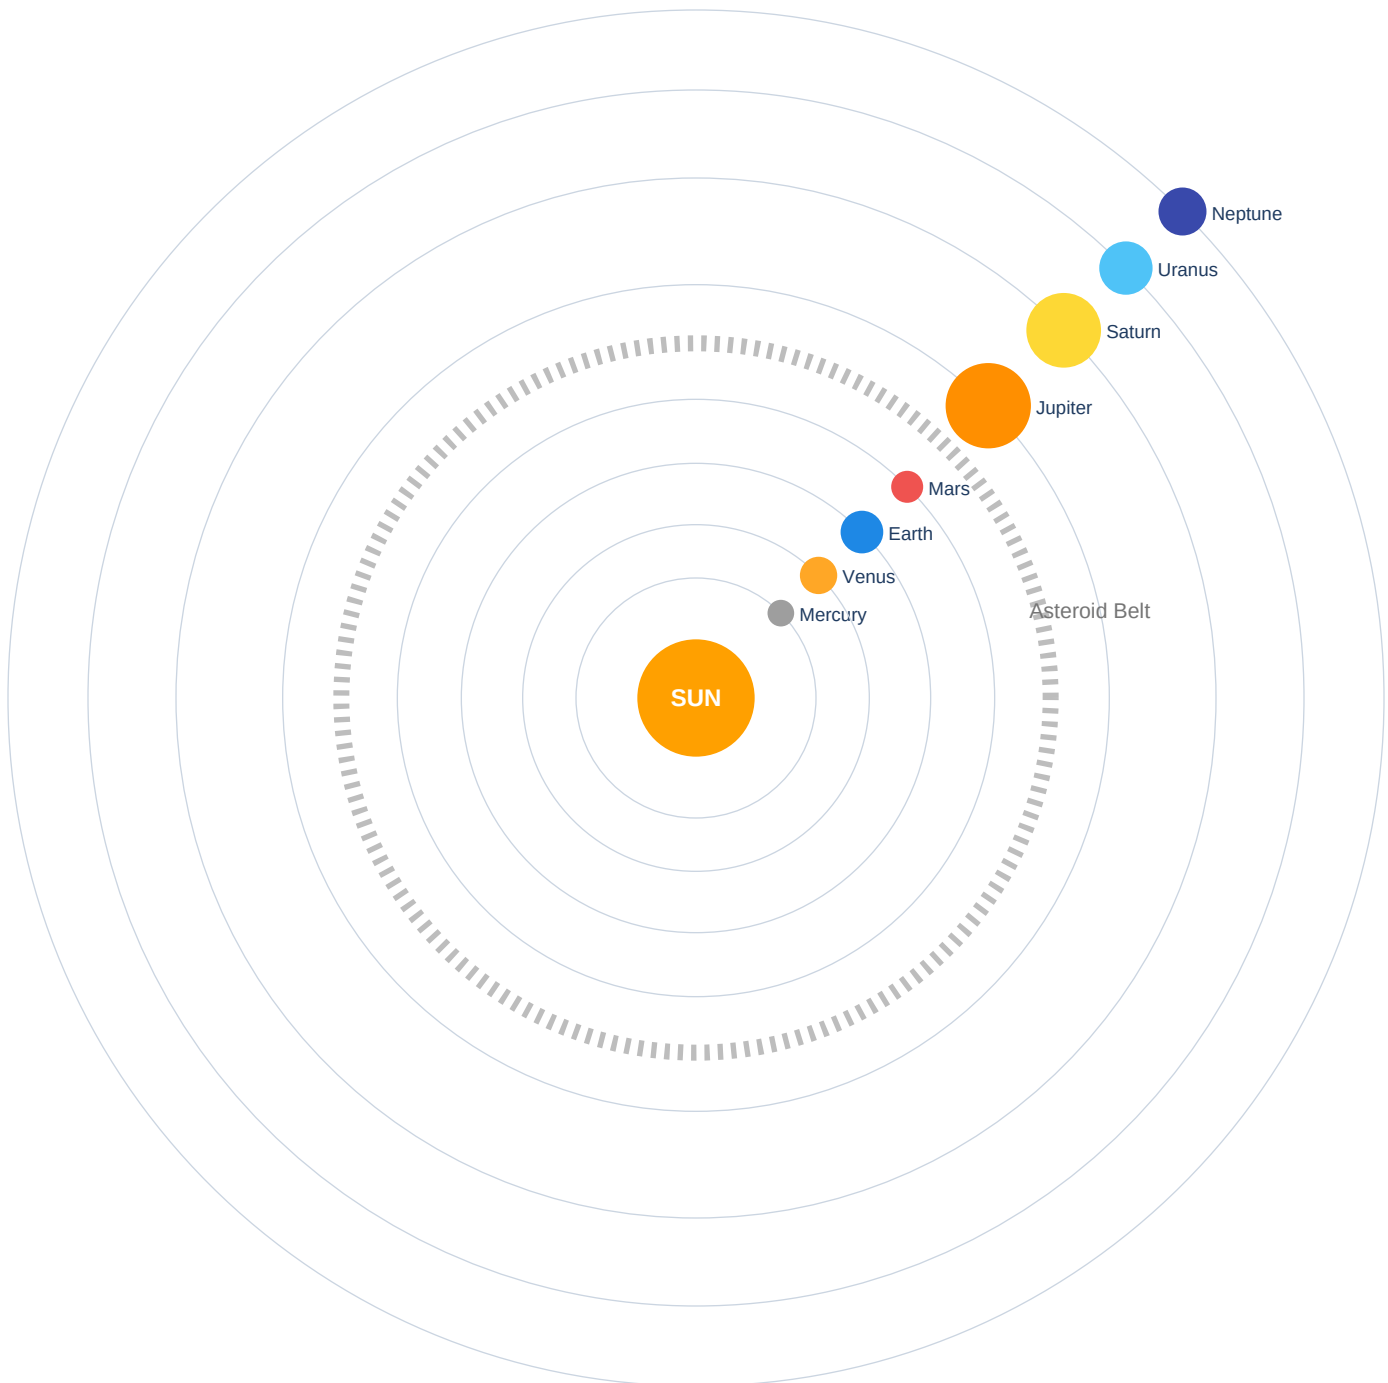

Figure 2: Simplified orbital diagram. Distances and sizes are not to actual scale.

Zones of the Solar System
